1 The 4 ad formats — rate-card inputs

Mall Plus ad set · singular bundle of 4 formats

CAROUSEL

Always-on · browse layer

₱285 CPM

Up to 10 product/category cards · freq cap 3-4/user/day · mix weight set on launch

FEATURED BRANDS

Branding shelf

₱304 CPM

Logo + shelf artwork · reserved slot booked ≥7 days ahead · JBP tier if applicable

HOT KEYWORDS + SPONSORED

Search layer

₱11.40 CPC

Generic / branded / competitor keywords + match types · impressions free, pay per click

POP UP

Premium recall

₱361 CPM

Full-screen creative · reserved date+time ≥14 days ahead · 1,000-imp booking increments

PUSH NOTIFICATION

CANDIDATE 5TH

CRM-trigger · premium recall

TBD CPM

GCash official format (CPM-billed, ₱100K min/placement) · CTR base 4% · excluded from blend until rate lands

 **Push Notification — candidate 5th format (GCash official):** billed CPM only · min ₱300K media plan / ₱100K per placement · up to 29M daily reach · city-level + transaction + 50+ interest targeting · CTR base 4% (market e-comm 3.05-3.78% vs GCash CRM 6%) · rate via Partner Marketing — TBD

 **Strictly prepaid** — pay within **2 hours** of confirmation or booking auto-cancels

 **No refunds, no transfers** (penalty cases excepted)

 **Unlimited slots** per campaign window

 **Impressions guaranteed** (CPM contract) — ROAS delivered, never promised

2 SSP — choose the inventory

GCash only $\rightleftharpoons$ GCash + Mall Plus · skew slider drives the media split

Pop Up	₱361	3.93%	Premium recall

Blend set by target level (§3) → **Launch ₱271.70** → **Imperial ₱315.40** tier mixes

Ad product skew — where the media peso lands

0% = GCash only · 100% = Mall Plus only

◀ GCASH ONLY

50% GCASH · 50% MALL PLUS

MALL PLUS ONLY ▶

Blended CPM **₱295.45** · Blended CTR **1.41%** — GCash ₱304.00/1.41% (fixed card) · Mall Plus ₱286.90/1.41% (standard tier mix)

Skew feeds the flight-math calculator (§6): blended CPM/CTR = GCash card × GCash share + Mall Plus scenario blend × Mall Plus share. Data-tier pricing and the full gross/net revenue waterfall live in the **Programmatic Process Simulator** (/programmatic-process-simulator).

3 Target levels — DSP scenario

sets the Mall Plus side of the skew · mirrors Shopee Lower / Optimal / Higher

Launch

• Lower • max impressions

New brands / categories, awareness phase. Pop Up optional in early tiers.

₱271.70 blended CPM

Standard • Optimal • balanced

Ongoing campaigns, stable creative. 2% landing-conversion benchmark.

₱286.90 blended CPM

Conservative

• Higher • spend control

Mature / ROAS-sensitive clients, JBP Tier 2–3. Weekly spend review.

₱315.40 blended CPM

Mix weights → blended CPM

Carousel / Hot Kw / Featured Brands / Pop Up

Carousel 40%

Hot Kw 30%

Featured Brands 20%

Use for: ongoing campaigns, stable creative. Balanced spend vs conversion at **₱279–299** blended; 2% landing-conversion benchmark; Hot Keywords earns its weight via 2.00% CTR.

Same logic as TikTok's ROI-tier dial (3.3 beats 90% / 4.5 beats 85% / 5.1 beats 80%): a tighter target wins efficiency but shrinks the qualified pool — for Mall Plus, that's the Launch vs Conservative trade-off.

4 Targeting criteria — the DMP layer (GCash)

advertiser picks in DSP • segments applied at delivery

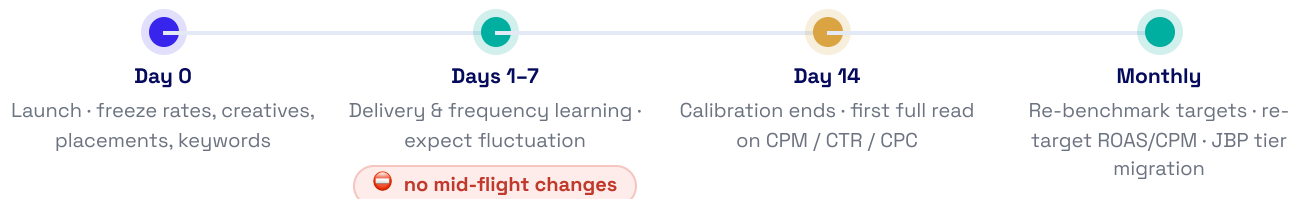

CRITERIA	TARGETABLE VALUES	DATA SOURCE	BEST USED FOR
Age • gender • SEC	Verified demographics (KYC)	GCash KYC records	All formats — creative & offer matching
Location	City-level (down to geo radius for SMS/push)	KYC + device location	Pop Up / Featured Brands local promos • payday clusters
Payment platform	Banked vs unbanked • wallet balance vs bank-linked • card users • GGives credit	Transaction data	Hot Kw: high-spender keywords • premium offers to banked • installment messaging to GGives
Transaction behavior	High/low spender • activities (send money, buy load, pay bills, shop)	Transaction data	Full-funnel: high spenders for Carousel • bills-payers for FMCG
Interests	50+ affinities (nightlifery, pet lovers, beauty junkies...)	Inferred from transactions	Carousel / Featured Brands category affinity
Credit behavior	GGives eligible / repayers / credit limit	Credit engine	Electronics & lifestyle windows (payday • GGives push “You qualify”)

Flow: advertiser selects criteria in the DSP (Mall Plus) → DSP requests the segment from the DMP (GCash) → GCash applies KYC/transaction filters at delivery → matched share is reported in the weekly KPI tracker. Data-tier pricing (Broad 0% • Interest +10% • Transaction +15% • CRM retarget +20% — PROPOSED) and the revenue split live in the **Programmatic Process Simulator** (/programmatic-process-simulator).

5 14-day calibration & weekly flight KPIs

changes restart calibration from Day 0

🕒 Calibration window

Reserved formats (Featured Brands, Pop Up): calibration applies to the **next** booking window — never live guaranteed slots.

💧 **Waterfall optimization (Guaranteed PPC):** start optimizing on front-end proxies (CTR / engagement) → qualified (add-to-cart / audience match) → sales (orders / GMV) → profit (ROAS / net margin). Cascade stages only as back-end conversion data accumulates — same logic as the 14-day calibration freeze. Live stage calc in the Programmatic Process Simulator.

📊 Weekly KPI tracker

sample flight · Standard scenario

KPI	W1	W2	W3	W4	ACTION TRIGGER
Impressions fill vs contracted	92%	96%	98%	99%	<95% → investigate delivery
Blended CPM vs ₱286.90	₱302	₱291	₱287	₱284	>+5% → re-check mix weights
CTR by format (vs benchmark)	1.1%	1.6%	1.9%	2.1%	<50% of bench → refresh creative
CPC Hot Kw vs ₱11.40 bid	₱12.8	₱12.1	₱11.6	₱11.2	CPC > bid → tighten match types
Landing conversion (2%)	1.4%	1.7%	2.0%	2.2%	binding lever → fix landing first
Audience match (targeted share)	86%	92%	96%	98%	<95% → widen criteria or add data tier
GMV per ₱ spent (ROAS)	1.8×	2.4×	2.9×	3.1×	vs target → monthly re-target

Illustrative numbers only — real monitor uses live flight data. Benchmarks: Pop Up 3.93% · Carousel 0.80% · Featured Brands 0.50% · Hot Kw 2.00% (Q2'23 GCash Ad Solutions, until BPS deck lands) · Push (candidate) 3.05–3.78% market / 4% base.

MALL PLUS REVENUE 5.36%

₱51,160

Media revenue at 50% Mall Plus skew: GCash ₱500,000 · Mall Plus ₱500,000 · Mall Plus take-rate (5.36% × GMV) ₱51,160.

Landing conversion fixed at the 2% benchmark. Blended CPM/CTR auto-update from the SSP skew (§2) × scenario mix (§3) — override the fields manually if needed.

7 Guardrails & caveats

🎯 Impressions guaranteed

CPM contracts guarantee delivery (reserved slots). ROAS depends on creative + landing + offer — never promise ROAS on a CPM product.

🛑 14-day freeze

Mid-flight changes reset calibration and waste budget. The single biggest execution lever.

📊 ROAS differs by format

Pop Up (3.93% CTR) outruns browse formats — never set one ROAS target across formats.

🔍 TBD items

Homepage Brand Ads CPM, GMV Max rate, AMS commissions — cross-check AMS/KAM before external use.

🔄 JBP migration

Budget crosses ₱21M or ₱50M → re-price with -5% / -10% + free media, re-run blended CPM.

🔔 Push = candidate 5th

GCash-official format (CPM-billed), rate TBD via Partner Marketing — keep excluded from blended CPM until confirmed.

8 O+O playbook & benchmarks — Optimo (A.S. Watson)

retail media benchmark set · research 2026-08-28

COLGATE · WATSONS TH · ULTIMATE PACKAGE

ROAS 17+ online · 101M+ imps · sale growth +23%

360° buy: 15-sec video, OOH, in-store LED + shelf, online + CPAS retargeting

NIVEA · WATSONS TR · ONSITE SPONSORED DISPLAY

ROAS 27.6× “8× benchmark” · CTR ≈1.0%

6.7M imps / 65.7K clicks · category focus + keyword/page-type targeting · PDP highest ROAS

VASELINE · SUPERDRUG UK · OFFSITE + IN-STORE

-40% CPLPV · -2% CPA vs category · +20% volume · +23% revenue

CRM audiences (previous purchasers) + DPA offsite, in-store screens — O+O link

 **Predictive CRM audiences** — OptimO’s “CIA” engine sells ready-made segments from loyalty data. Mall Plus analog: package GCash transaction/interest segments (50+ affinities, spend behavior) as a targeting add-on.

 **Full-funnel architecture** — awareness (Pop Up / Featured Brands) → consideration (Carousel) → conversion (Hot Kw + retargeting). GCash’s “offline” moment = the transaction/confirmation screen (Grab In-Transit analog).

 **ROAS anchors 17–28×** — achievable in retail media with CRM-heavy targeting (Colgate/Nivea), but case-study only — keep “delivered, not promised” (guardrail \$7).

 **Insight layer as paid add-on** — Category Trends / Brand Performance-style reports bundled with media packages; eLab-style personalised planning as a premium service tier.

 **Automation proof (TikTok GMV Max)** — Product +99% GMV / +38% ROI; LIVE +483% GMV / +127% ROI; ROI-dial + asset supply instead of manual optimization — the upside case for Mall Plus’ Auto upgrade path (\$3). Source: TikTok Commerce 101 deck (2026-08-28).

 TikTok Commerce 101 — automation benchmarks

enablement deck · no pricing published

PRODUCT GMV MAX

+99% GMV · +38% ROI · +3.45× video boost

ROI target dial: **3.3** (beats 90% of similar products) · **4.5** (85%) · **5.1** (80%) — higher target = smaller qualified pool. SKU split: Super Hero 50% @ 12× · Hero 25% @ 8×

LIVE GMV MAX

+483% GMV · +127% ROI · +157% budget scalability

LIVE ROI target ex. **20** · Golden First Hour: 10–20% budget in first 10 min · min 3-day learning · change tROI once/day · avg live viewer <60s → 3–5 min loops

LIVE BUDGET CADENCE (PERIOD SPLIT)

Big Sale Days 55% · BAU 25% · launches <10% · small sales 10%

ROAS vs target: launches/BAU 110% · sale days 80% — front-load only when priority windows exist; ROI target = secondary pacing lever. Mall Plus analog: payday/DD spikes

Rule of thumb: remove SKU/video when ROI runs **20% below target**. Planning formula: $GMV = Traffic \times CVR \times AOV$ · Budget = $GMV \div ROAS$. Market: TikTok is now SEA #2 (\$45.6B GMV 2025, overtook Lazada); PH e-comm \$24.5B → \$75.6B by 2033 (14.02% CAGR).
