

Mall Plus Campaign Optimization Process

Modeled on Shopee Ads' "[Optimising your ROAS Target Feature](#)" (ads.shopee.ph/news/1677) — adapted to the Mall Plus ad set (4 ad formats)

Rev 2026-08-27 · Basis: Platform_Ad_Products_Comparison.xlsx (Shopee H1 2026 deck, ads.shopee.ph) · Mall Plus rates = MadTech card -5% (Carousel ₱285 · Featured Brands ₱304 · Hot Keywords ₱11.40 CPC · Pop Up ₱361) · take rate 5.36% net of VAT · JBP tiers (≤₱20M / ₱21–50M / >₱50M)

0 · What we're mirroring (Shopee → Mall Plus map)

SHOPEE ADS ELEMENT (SOURCE)	MALL PLUS ANALOG
Auto Bidding under Product/Shop Ads	Campaign optimization mode: Auto (future GMV-Max-style allocation across the 4 formats) vs Manual (fixed rate-card CPM/CPC — current model)
System Optimised	Auto-allocation toward a system-selected mix across Carousel / Featured Brands / Hot Keywords / Pop Up
Custom ROAS Target	Client-set ROAS / CPC target (Hot Keywords) or target CPM (Carousel / Featured Brands / Pop Up)
3 recommended targets: Lower / Optimal / Higher	Launch (max impressions) / Standard (balanced) / Conservative (spend control)
Learning phase ~14 days; no changes mid-phase	Calibration window 14 days ; freeze rates, creatives & placements; changes restart calibration from Day 0
Update ROAS Target monthly after stabilization	Monthly review & re-targeting (CTR/CPM/CPC refresh cadence)
"ROAS Target is not guaranteed"	Impressions are guaranteed (CPM contract); ROAS is delivered, not guaranteed — landing conversion is the binding lever

1 · Before you launch — inputs & requirements per ad format

FORMAT	CLIENT INPUTS REQUIRED	BOOKING REQUIREMENTS	SET ON LAUNCH
Carousel ₱285 CPM always-on / browse layer	Up to 10 product/category cards · browse-placement goal	Prepaid package · confirmed flight dates	Target CPM ₱285 · frequency cap (3–4/user/day) · mix weight
Featured Brands ₱304 CPM branding shelf	Brand logo + shelf artwork · 1 hero message	Reserved date slot (guaranteed) · booked ≥7 days ahead	Target CPM ₱304 · shelf position · JBP tier (if applicable)
Hot Keywords + Sponsored ₱11.40 CPC search layer	Keyword list: generic / branded / competitor + match types (phrase/exact) · product links	CPC budget (pay per click, impressions free)	Max CPC bid ₱11.40 · optional ROAS target (auto) · negative keywords
Pop Up ₱361 CPM premium recall layer	Full-screen creative (spec) · offer/message	Reserved date + time window (guaranteed) · booked ≥14 days ahead · JBP tiers apply	Target CPM ₱361 · 1,000-imp booking increments · auto-pause at target

Booking rules (mirroring Shopee H1 2026): strictly prepaid · pay within 2 hours of confirmation or the booking auto-cancels · no refunds, no transfers (penalty cases excepted) · unlimited slots per campaign window.

2 · Set the objective & bidding mode

- Objective first** (from client brief): Reach/brand (Carousel + Featured Brands + Pop Up) · Conversion (Hot Keywords) · Full-funnel (blended package).
- Manual (launch default)** — fixed rate-card rates: transparent, predictable, the Mall Plus differentiation vs opaque auctions.
- Auto (upgrade path)** — a future "Sponsored Max"-style Mall Plus package auto-allocates budget across the 4 formats toward a client ROAS target (validated by Lazada Sponsored Max, TikTok GMV Max, Shopee GMV Max).
- Package tier sets the mix** — Tier 1 Launch = Carousel 50% + Hot Keywords 30% + FB 20% → up to Imperial = Pop Up-heavy 50% (CPM-Showcase mix weights).

3 · Set targets per format — the 3 recommended levels

LEVEL	WHEN TO USE	WHAT TO SET
Launch (Lower / max impressions)	New brands, new categories, awareness phase	Accept higher blended CPM toward budget (A blended ₱271.70 entry); maximize impressions; Pop Up optional in early tiers
Standard (Optimal / balanced)	Ongoing campaigns, stable creative	Target blended CPM ₱279–299 (mid tiers); balanced spend vs conversion; 2% landing conversion benchmark
Conservative (Higher / spend control)	Mature campaigns, ROAS-sensitive clients, JBP Tier 2–3	Tight target CPM; Pop Up-heavy mix (₱315.40 top tier); JBP –5%/–10% discounts; weekly spend review

Benchmark rule (from Shopee): use historical performance as the starting ROAS/CPM target — for Mall Plus, anchor on Q2'23 GCash Ad Solutions CTRs (Pop Up 3.93% · Carousel 0.80% · Featured Brands 0.50% · Hot Kw 2.00%) until the Business Partner Solutions deck lands, then refresh.

4 · Launch & calibration window (14 days)

- Every new campaign (or any change to rates, creatives, placements, keywords) starts a **14-day calibration window**.
- **Expect fluctuations** — do NOT adjust rates, swap creatives, or change placements mid-window (mirrors Shopee's learning-phase rule).
- Client flag: "performance fluctuates during the first 14 days; changes restart the window from Day 0."
- For reserved formats (Featured Brands, Pop Up), calibration applies to the **next** booking window, not live guaranteed slots.

5 · Monitor & optimize (weekly during flight)

KPI	WHERE IT LIVES	ACTION TRIGGER
Impressions delivered vs contracted	Booking sheet / package delivery	<95% fill → investigate delivery; auto-pause at target (Pop Up)
Blended CPM vs tier target (₱271.70–315.40)	CPM Showcase	>+5% over target → re-check mix weights
CTR by format (3.93% / 0.80% / 0.50% / 2.00%)	Campaign dashboard	CTR <50% of benchmark → refresh creative/keywords
CPC (Hot Keywords) vs ₱11.40 bid	Keyword report	CPC > bid → tighten match types / negative keywords
Landing conversion (2% benchmark)	GCash funnel	The binding lever — if low, fix landing page before scaling spend
ROAS / GMV per ₱ spent	Client report	vs target; monthly re-targeting (Section 6)

6 · Monthly review & re-targeting

1. Pull performance by format vs the previous month.
2. **Re-benchmark targets**: update CTRs/CPMs/CPCs when the BPS deck CTRs arrive; refresh blended CPM if rates move.
3. **Re-target ROAS/CPM** per client (Shopee recommends updating ROAS targets monthly).
4. **Tier migration**: if budget crosses JBP thresholds (₱21–50M → −5%, >₱50M → −10% + free media), re-price the package and re-run the blended CPM.
5. Decide: renew reserved slots (Pop Up / Featured Brands) next month — guaranteed slots are date-bookable and sell out.

7 · Guardrails & caveats

- **Impressions are guaranteed; ROAS is not** — CPM contracts guarantee delivery (reserved slots), but sales depend on creative + landing page + offer. Never promise ROAS on a CPM product.
- **Learning-phase discipline** — the 14-day freeze is the single biggest execution lever; mid-flight changes reset calibration and waste budget.
- **ROAS targets differ by format** — Pop Up (3.93% CTR) outperforms browse formats; do not set one ROAS target across formats.
- **TBD items** (from Shopee H1 2026): Homepage Brand Ads CPM, GMV Max rate, AMS commissions — cross-check with the AMS/KAM before external use; keep Mall Plus analogs marked TBD until validated.
- **Operational mirror**: prepaid, 2-hour payment window, no refunds/transfers, unlimited slots — keep Mall Plus booking simple and Shopee-consistent.
